

# Verified Carbon Standard

The VCS program is the most extensive voluntary greenhouse gas program in the world. Collectively, more than 1,808 certified VCS projects have reduced or eliminated more than 966 million tons of carbon and other greenhouse gas emissions from the atmosphere. Individuals and businesses around the world recognize the importance of reducing greenhouse gas emissions. As a result, many of them reduce their carbon footprint through energy efficiency and other measures. However, these companies are often unable to meet their goals or eliminate their carbon footprint by reducing emissions internally alone, at least in the short term, and they need a flexible mechanism to achieve these ambitious goals. Enter the carbon market.

By using carbon markets, companies can offset or offset their emissions by canceling carbon credits generated by projects that reduce greenhouse gas emissions elsewhere. Of course, it is critical to ensure or verify that the emissions reductions achieved by these projects are actually taking place. That's the job of the VCS program - ensuring the credibility of emissions reduction projects. Once a project is certified under the strict rules and requirements of the VCS program, project developers can earn tradable GHG credits, which we call Verified Carbon Units (VCUs). These VCUs can then be sold on the open market and retired by individuals and companies to offset their own emissions.

Verra's role is to develop and manage the program. We oversee all operational components of the VCS program and are responsible for updating the VCS rules to ensure the quality of the VCU. The development of the VCS program is supported by the VCS Program Advisory Group, a multi-stakeholder body that helps ensure that the VCS program continues to serve its users in an effective and efficient manner and drives practical solutions to mitigate climate change.

## WHAT WE CAN ASSIST:

In Peterson Projects & Solutions, we can assist your business on reduction of greenhouse gas program preparation. We can assist your business whether on sets out all specific requirements for developing projects and for the validation, monitoring and verification of projects and GHG emission reductions and removals which wants to ensure that all the required documents are suited to the requirements

We can deliver our Verified Carbon Standard consultancy in many types of services, including:

1. Survey and mapping on your supply chain
2. Develop specific implementation of carbon certification scheme through gap assessment on your current business
3. Provide sustainable agricultural management in-house training
4. Due diligence assistance
5. Certification audit preparation and accompaniment
6. Post-audit corrective action assistance
7. Annual Monitoring and Internal Audit Assistance

Our advice and support is based on almost 100 years of experience and expertise in providing solutions to a broad range of customers including multinational companies, small and medium-sized enterprises, associations, non-governmental organizations and governments.

We ensure you that your trust is well placed
